

SAUZI . AI

BRAND ASSETS

V0.1 / CONCEPT SYSTEM

AI-powered analytics stack and systems building

CORE MARK

DATA RALLY

GUARDIAN

DATA SENTINEL

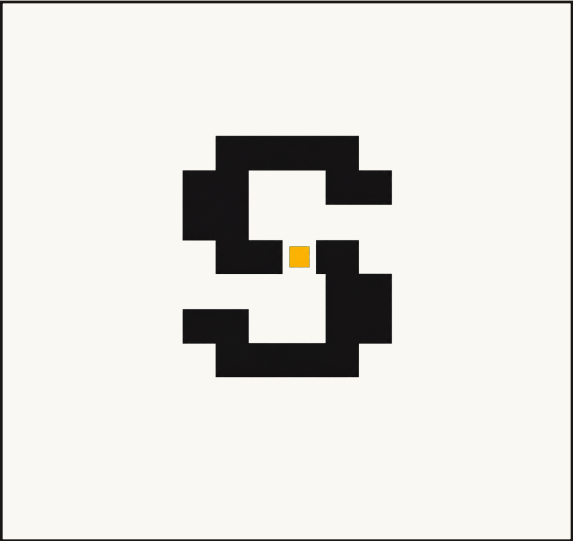

EXPLORER

QUERY RANGER

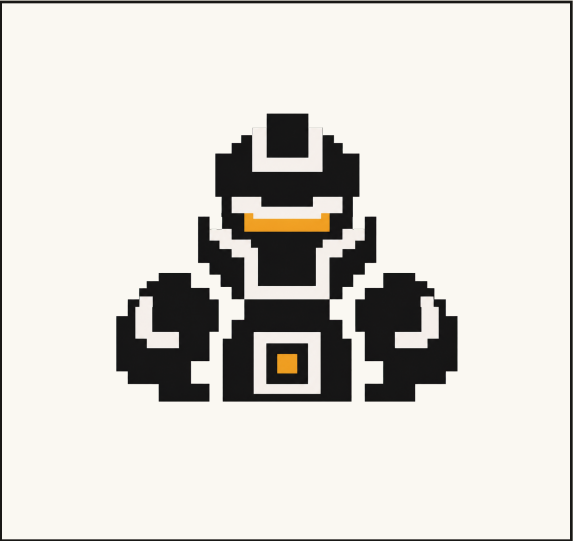

ONE BRAND. THREE PLAY MODES.

A flexible identity system with one core mark and two character-led expressions.

DATA RALLY

Default corporate mark. Use for navigation, company signatures, formal documents, sales materials, and places where clarity must win.

DATA SENTINEL

Guardian identity. Use for trust, infrastructure, governance, security, enterprise delivery, and reliability-focused stories.

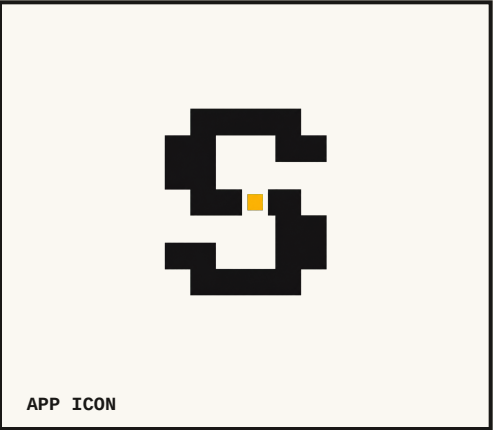

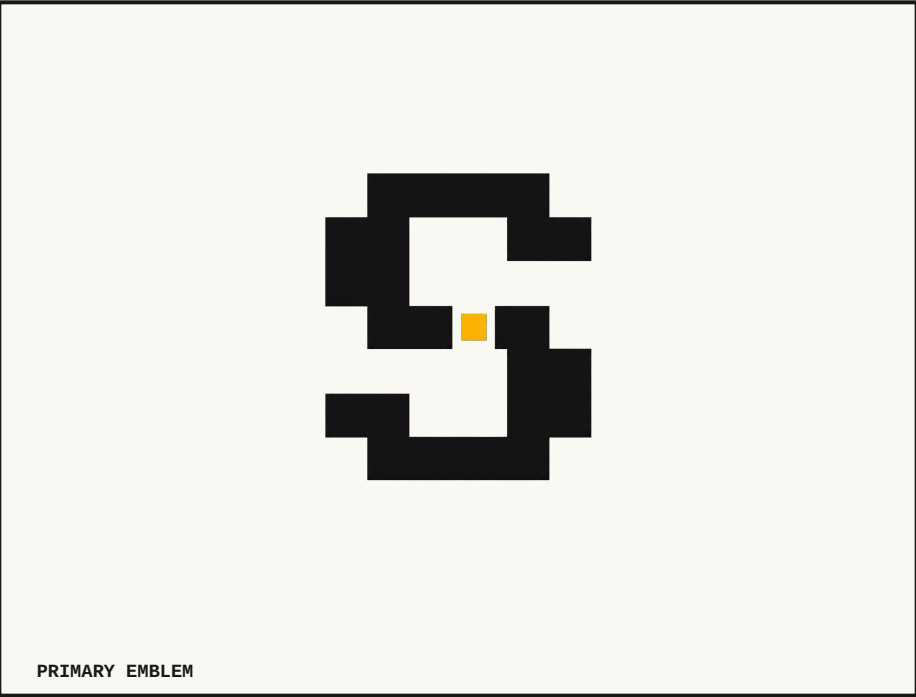

QUERY RANGER

Explorer identity. Use for analytics, discovery, AI agents, product guidance, experimentation, and insight-led interactions.

DATA RALLY

The permanent corporate anchor and simplest expression of the brand.

ROLE

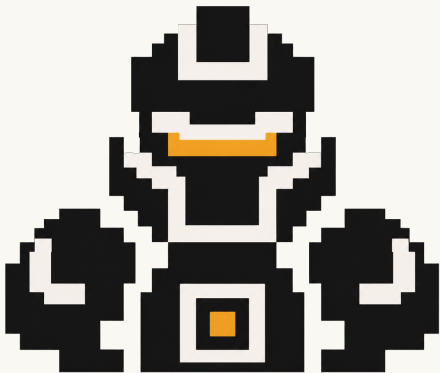

Data Rally is the default mark. Its amber packet represents a live question moving through an analytics system toward an answer.

BEST USED FOR

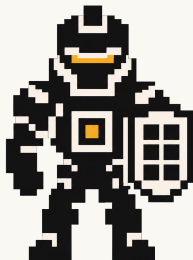

Navigation, proposals, legal and corporate documents, partner materials, signatures, and any context where the company must read immediately.

DATA SENTINEL

The protector of reliable infrastructure, governed systems, and trusted delivery.

PRIMARY EMBLEM

CHARACTER

APP ICON

HORIZONTAL LOCKUP

ROLE

Data Sentinel embodies dependable systems. The amber visor is active intelligence; the chest core is the Data Rally packet; the grid shield represents structured, protected data.

BEST USED FOR

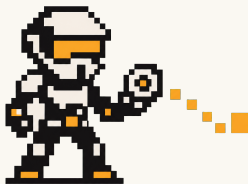

Infrastructure, architecture, security, governance, enterprise delivery, reliability messaging, and technical service lines that require confidence.

QUERY RANGER

The active intelligence that searches, tests, and returns with usable answers.

PRIMARY EMBLEM

CHARACTER

APP ICON

HORIZONTAL LOCKUP

ROLE

Query Ranger represents curiosity in motion. The scanning visor locates signal, the handheld tool interprets it, and the data trail shows an answer being discovered.

BEST USED FOR

AI agents, product interactions, analytics exploration, discovery workshops, experiments, onboarding, education, and insight-led campaign stories.

THE FOUR-COLOR OPERATING SYSTEM

A compact palette keeps every mascot, interface, and campaign in the same game world.

NEAR BLACK
#191816

WARM CREAM
#F1EDE4

SIGNAL AMBER
#F4A300

BURNT ORANGE
#B6542E

PIXEL RULE

Use hard square geometry and clean stepped corners. Preserve intentional pixel edges. Do not smooth, bevel, distort, or apply faux 3D effects.

ACCENT RULE

Amber represents the active query, insight, or data point. Burnt orange provides depth and secondary emphasis. Neither should dominate the mark.

BACKGROUND RULE

Prefer warm cream or near black. Maintain strong contrast. Avoid noisy imagery behind a logo unless a solid holding shape protects it.

CHOOSE THE RIGHT PLAYER

Assign each identity a job so the system feels intentional instead of interchangeable.

SURFACE	IDENTITY	WHY
Website navigation	DATA RALLY	Always-on corporate anchor
Sales and proposals	DATA RALLY	Most formal and compact
Infrastructure services	DATA SENTINEL	Trust and dependable delivery
Security and governance	DATA SENTINEL	Protection without fear tactics
AI agent experiences	QUERY RANGER	Active exploration and guidance
Analytics discoveries	QUERY RANGER	Finding signal in complex data
Social campaigns	ANY / BY STORY	Choose the character that matches the narrative

DO

Keep the core mark simple. Give mascots a clear story role. Use the app icons at small sizes. Preserve generous clear space.

DO NOT

Do not mix both mascots in one compact logo. Do not add game characters, weapons, effects, or colors outside the system.

READY FOR CONCEPT-STAGE USE

This package supports review, prototyping, internal presentations, and early digital exploration.

INCLUDED Transparent PNG masters for Data Rally, Data Sentinel, and Query Ranger; horizontal lockups; app icons; full-body character art; and the three approved concept boards.	STATUS These are AI-generated raster concepts. Exact geometry, spacing, typography, and trademark clearance have not yet been finalized.	NEXT GATE Select final character geometry, redraw as master vectors, test at small sizes, finalize clear-space rules, and complete a trademark review.
